

FOR IMMEDIATE RELEASE

### The Invicta Subaqua Collection

Led with expert engineering, no feat or occasion will ever be too great for Invicta's Subaqua to handle. The sheer magnitude of this mighty timepiece is superbly executed with surgical-grade stainless steel, Swiss movements and multiple color options of ionic plating. Managing up to 500 meters of water, finished off with a unidirectional rotating bezel, and integrated shock resistance- the Invicta Subaqua is the diver definitive in negotiating any adventure by land or by sea.

**FOR IMMEDIATE RELEASE**

**The stakes have risen and a phenomenon has arrived: The Invicta Subaqua V.**

Four years in the making, Invicta's engineers realized this timepiece exclusively in-house. To reach such a complicated level in horology, the Invicta team of designers and engineers had to think beyond any previous standards. With a transformed, innovative pusher complication, 36 individual micro-engineered components and a bracelet boasting individual frame protectors, the Subaqua V sets an unprecedented standard.

The unique pusher complication transforms and reinvents how high-end pusher systems work. Compared with conventional screw down crown systems, the patented system elevates the pusher while the locking system stays in place, offering 20 times more water resistance.

The watch case complication consists of 36 individual micro-engineered components, which are carefully assembled involving over 100 specialist man-hours. The Subaqua V top ring now has 5 riders totally integrated with the top-ring and a hollow cave construction, allowing all fingertip sizes to grasp firmly and secure the uni-directional top-ring for activation.

The dial consists of 8 different components, a new set of hands has been created with the Invicta design element, and due to its unusual wide structure, the dial offers much clearer time reading.

The newly developed bracelet has more components and elements than any other Subaqua bracelet. The multi construction bracelet has individual frame protectors that individually fit on top and in between the beautifully crafted base bracelet. The base bracelet has to be carefully cut with next to zero tolerance to allow the frames to sit and function correctly.

The Invicta Subaqua V, raising the stakes.
